Database 1

TD : XML Export

During this exercise you will work with a single database `tmdb.db` containing information on the movies and actors. Your goal is to export it to XML that is structured according to the DTD in file `tmdb.dtd`. The output file has to be well-formed and valid XML file.

Your python program should be named `export.py` and should read the input file `tmdb.db` from the current directory and should produce the output file `tmdb.xml` also in the current directory.

You are to submit on Moodle a ZIP file `name-dbs20-td2.zip` with all the necessary code.
